How We Lead
How Simple Becomes Culture

The Problem & The Solution

The Problem

Fragmented Investment Management

Investors rely on multiple disconnected platforms to manage different asset classes — creating silos, blind spots, and operational overhead.

Manual P/L Tracking

Profit and loss calculations done by hand are time-consuming, error-prone, and impossible to scale across a growing portfolio.

Global Complexity

Currency conversion across international investments adds a further layer of friction — with no automated tooling to reconcile multi-currency holdings.

The Solution

One Centralized Platform — Wealth Ledger brings every major asset class under a single roof, eliminating the fragmentation that plagues modern retail investors.

All Asset Classes

Stocks, ETFs, Fixed Deposits, Cash & Commodities

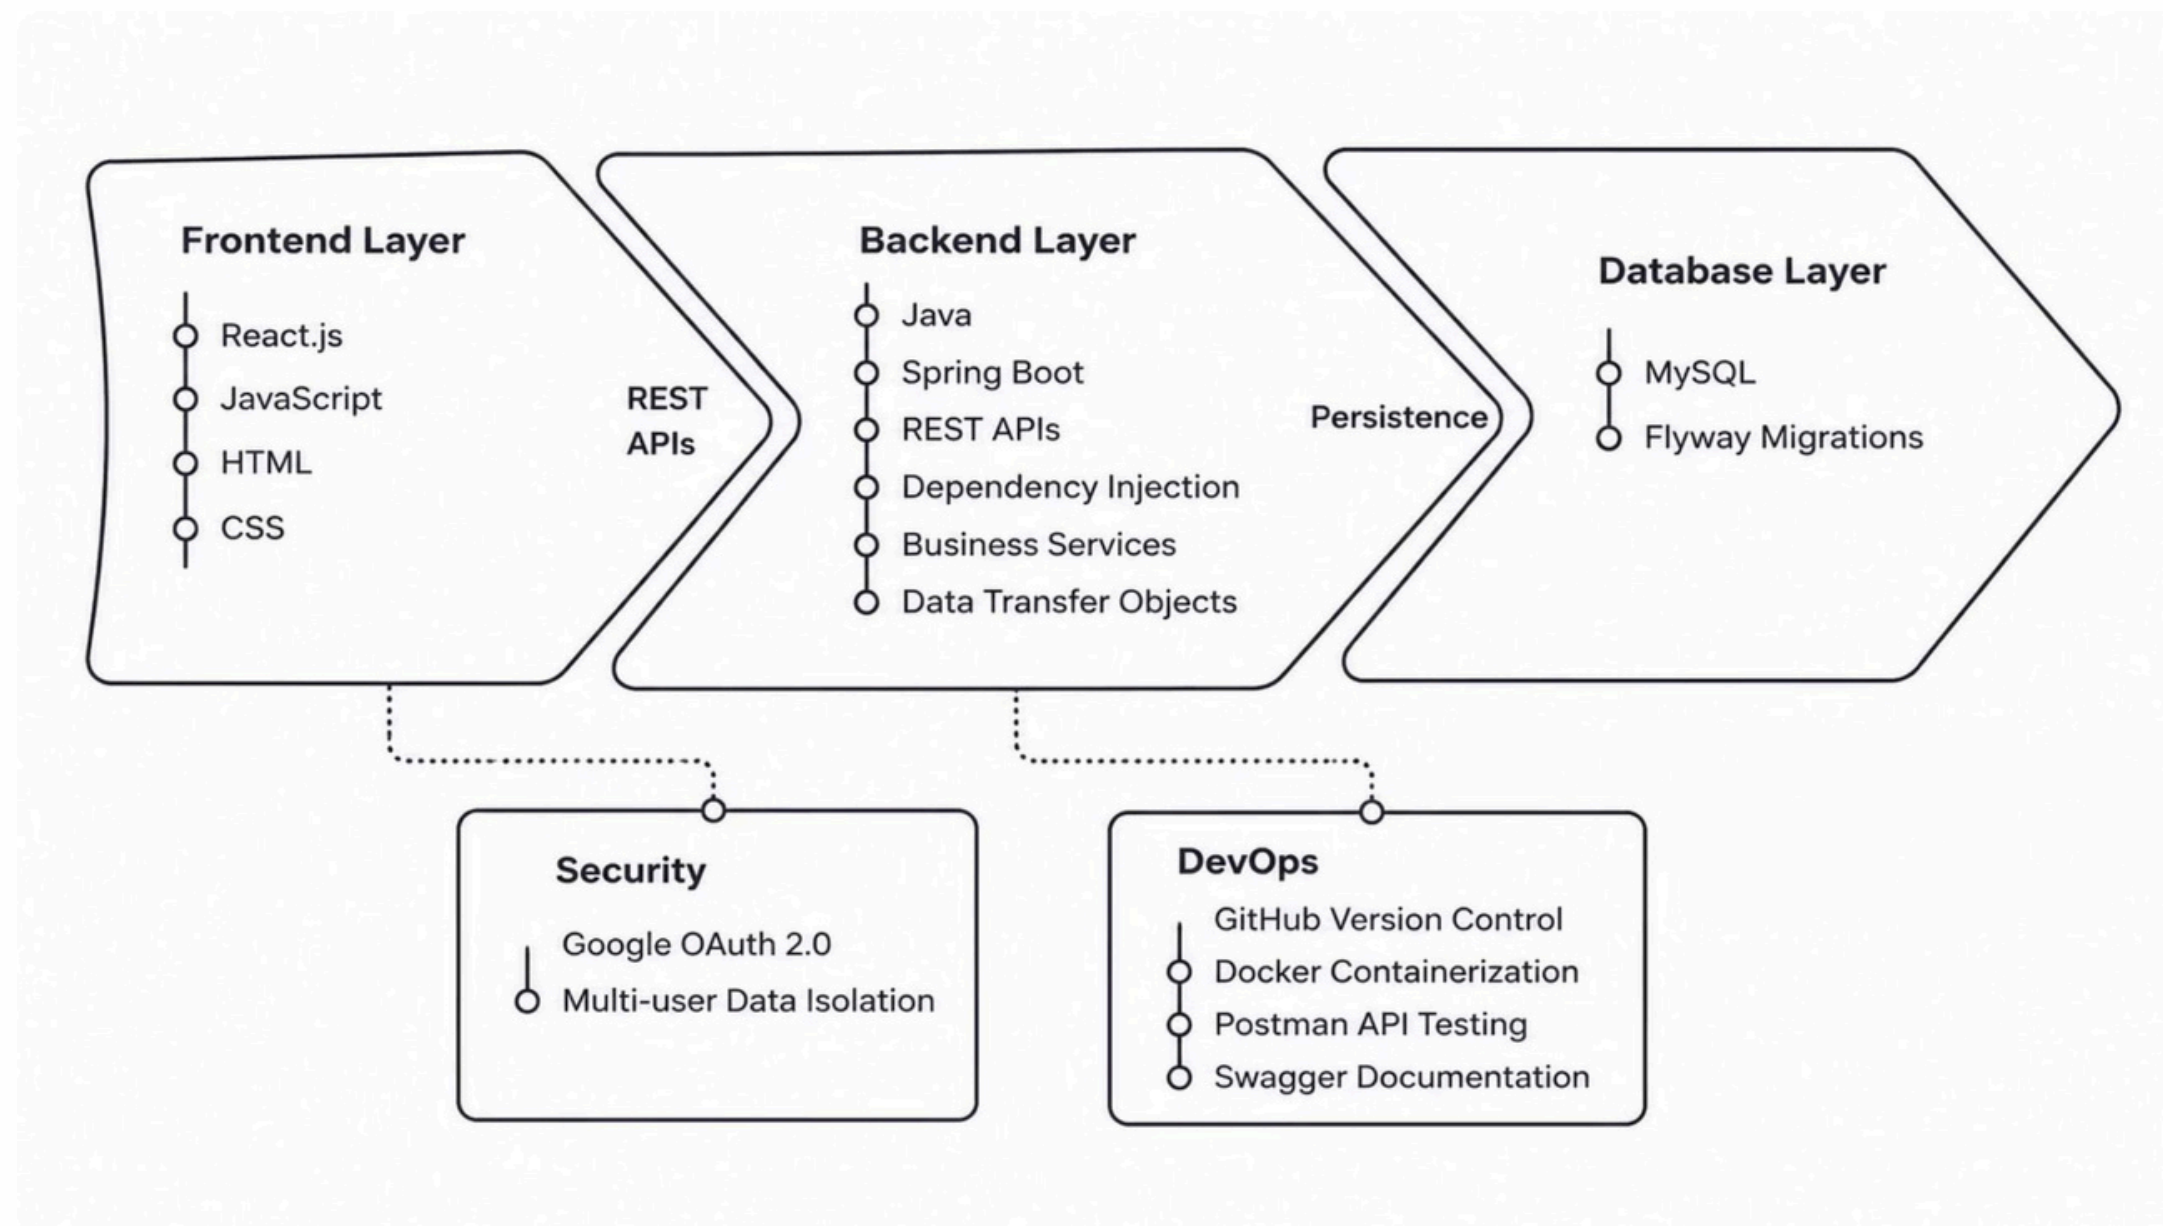

Single Dashboard

Complete portfolio view with real-time performance

Automated Tracking

Transactions, P/L, and currency conversion — hands-free

TECHNICAL DESIGN

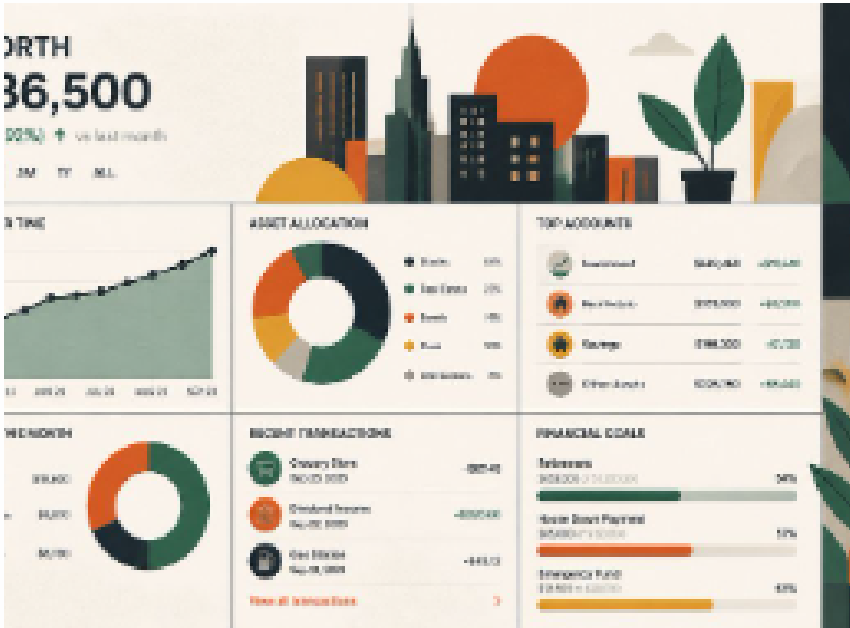

Frontend Layer

- React.js – Component-driven UI
- JavaScript – Client-side logic
- HTML / CSS – Structure & styling

Backend Layer

- Java & Spring Boot – REST API engine with DI
- Business Services – P/L, FX, aggregation
- DTOs – Clean data contracts

Key Features

Portfolio Dashboard

- Total Net Worth & Daily Change
- Asset Allocation Overview
- Top Gainers & Recent Activity

Investment Management

- Add, Edit & Delete Investments
- Stocks, ETFs, Fixed Deposits, Cash & Commodities

Transaction Management

- Buy/Sell Tracking with P/L Calculations
- Transaction History & FX Conversion

Reporting & Milestones

- Export Portfolio Data
- Track Milestones & Financial Goals

THANK YOU
